"L" Series Grip

"O" Series Grip

Scorpion Technologies Ltd. Manufactures a broad line of control grips, joysticks, pendant stations and accessories for all industries. Our grips are used on everything from forestry equipment to submersibles.

Our top quality products, reasonable pricing, quick order turnaround, and outstanding customer service all combine to make scorpion your best value for control handles.

We can supply grips and joysticks with as few as 1 function or with as many as 28. We offer momentary, maintained and proportional functions on all our models. A wide variety of options and accessories are available to make installation easy.

This brochure shows just a small percentage of what we offer. If you have an application, please give us a call! About three quarters of our products are custom made, and we will be more than happy to work with you to configure a grip that meets your exact needs. If you want more information, phone us toll free at 1-877-377-1117 or have a look at our website www.controlgrips.com.

"JS" Series Joystick

INTRODUCING

We have a brand new joystick available! Scorpion Technologies' JS series joystick is a simple, low cost proportional joystick that gives great performance for demanding applications.

This joystick uses non contacting hall effect sensors for a rated life in excess of ten million cycles! There are only three moving parts, so there is almost nothing to wear out.

Like our other products, you can specify exactly which configuration you want. This joystick is available in single or dual axis spring-return-to-center, and you can order it with a plain knob, or any of our control grips.
